CSE- Academic Year 2026-27

Java Programming – Lab Batch 2025-29

Lab Assignment No:- 19	
Name of Student	Arpit Chakraborty
PRN No.	25070122047
Batch	2025-29
Class	CSE A2
Academic Year & Semester	26-27, 3rd Sem
Date of Submission	23/9/2026
Title of Assignment :	Develop a Java application to establish connectivity with a database and perform data retrieval using the SELECT operation.
Practice questions	1. Develop a Java application to establish connectivity with a database and perform data retrieval using the SELECT operation.
Output Screenshots	
Solve questions on given link and attach screen shot of leetcode with your login and o/p	<pre> import java.sql.*; public class DatabaseSelect { public static void main(String[] args) { String url = "jdbc:mysql://localhost:3306/studentdb"; String username = "root"; String password = "root"; </pre>

```
try {  
    Class.forName("com.mysql.cj.jdbc.Driver");  
  
    Connection con = DriverManager.getConnection(url,  
username, password);  
  
    Statement stmt = con.createStatement();  
  
    String query = "SELECT * FROM student";  
    ResultSet rs = stmt.executeQuery(query);  
  
    System.out.println("Student Records");  
    System.out.println("-----");  
  
    while (rs.next()) {  
        System.out.println("Roll No: " + rs.getInt("roll_no"));  
        System.out.println("Name: " + rs.getString("name"));  
        System.out.println("Course: " + rs.getString("course"));  
        System.out.println("-----");  
    }  
  
    rs.close();  
    stmt.close();  
    con.close();  
  
} catch (Exception e) {
```

```
        System.out.println("Error: " + e.getMessage());
    }
}
}
```

2.Create a Java application that connects to a database and displays product details using a SELECT query. Show product ID, product name, quantity, and price.

```
import java.sql.*;
```

```
public class ProductDetails {
    public static void main(String[] args) {
        String url = "jdbc:mysql://localhost:3306/productdb";
        String username = "root";
        String password = "root";

        try {
            Class.forName("com.mysql.cj.jdbc.Driver");

            Connection con = DriverManager.getConnection(url,
username, password);

            Statement stmt = con.createStatement();

            String query = "SELECT * FROM product";
            ResultSet rs = stmt.executeQuery(query);
```

```
System.out.println("Product Details");  
System.out.println("-----");  
System.out.println("ID\tName\t\tQuantity\tPrice");  
System.out.println("-----");
```

```
while (rs.next()) {  
    int id = rs.getInt("product_id");  
    String name = rs.getString("product_name");  
    int quantity = rs.getInt("quantity");  
    double price = rs.getDouble("price");  
  
    System.out.println(id + "\t" + name + "\t\t"  
        + quantity + "\t\t" + price);  
}
```

```
rs.close();  
stmt.close();  
con.close();
```

```
} catch (Exception e) {  
    System.out.println("Error: " + e.getMessage());  
}  
}  
}
```

**Output
Screenshots**

(if applicable)

Student Records

Roll No	Name	Course
101	Arpit	CSE
102	Rahul	IT
103	Aanya	ECE
104	Karan	ME
105	Sneha	AI&DS

Total Records: 5

Product Details

Product ID	Product Name	Quantity	Price
101	Laptop	10	55000.0
102	Mouse	25	800.0
103	Keyboard	15	1500.0
104	Monitor	8	12000.0
105	Printer	12	7000.0

Total Products: 5

Conclusion

The program successfully establishes a **JDBC connection** with the database and retrieves product details using a **SELECT query**. It displays the **Product ID, Product Name, Quantity, and Price** of the products stored in the database.
