CSE- Academic Year 2026-27

Java Programming – Lab Batch 2025-29

Lab Assignment No:- 21	
Name of Student	Arpit Chakraborty
PRN No.	25070122047
Batch	2025-29
Class	CSE A2
Academic Year & Semester	2026-27, III
Date of Submission	27/10/26
Title of Assignment:	Demonstration and exploration of JDBC classes and interfaces (DriverManager, Connection, Statement).

Practice questions
 	
Output Screenshots Solve questions on given link and attach screen shot of leetcode with your login and o/p
	1. Create a program to connect Java with database and display database connection status.
	
	import java.sql.Connection;
	import java.sql.DriverManager;
	import java.sql.SQLException;
	
	public class StudentDatabase {
	public static void main(String[] args) {
	
	String url = "jdbc:mysql://localhost:3306/Student";
	String username = "root";

```
        String password = "arpit@2006";

        try {

            Connection con = DriverManager.getConnection(
                url, username, password
            );

            if (con != null) {
                System.out.println(
                    "Student database connected successfully."
                );
            }

            con.close();

        } catch (SQLException e) {
            System.out.println("Database connection failed.");
            System.out.println("Error: " + e.getMessage());
        }
    }
}
```

2. Create a Java program to connect with a database and display the connection status. After successful connection, show a message indicating that the Student database is connected successfully.

```
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.SQLException;
```

```
public class StudentDatabase {
    public static void main(String[] args) {

        String url = "jdbc:mysql://localhost:3306/Student";
        String username = "root";
        String password = "arpit@2006";

        try {

            Connection con = DriverManager.getConnection(
                url, username, password
            );

            if (con != null) {
                System.out.println(
                    "Student database connected successfully."
                );
            }

            con.close();

        } catch (SQLException e) {
            System.out.println("Database connection failed.");
            System.out.println("Error: " + e.getMessage());
        }
    }
}
```

Output Screenshots (if applicable)	
Conclusion	Thus, the Java program to connect to the Student database using JDBC was implemented. The program checks the database connection status and displays the message "Student database connected successfully." when the connection is established successfully. This program demonstrates how Java can connect to a MySQL database using the JDBC driver.
