CSE- Academic Year 2026-27

Java Programming – Lab Batch 2025-29

Lab Assignment No:- 29	
Name of Student	Arpit Chakraborty
PRN No.	25070122047
Batch	2025-29
Class	CSE A2
Academic Year & Semester	2026-27, III
Date of Submission	27/10/26
Title of Assignment:	Write a JSP application to demonstrate the basic concepts of Java Server Pages.
Practice questions **Output Screenshots Solve questions on given link and attach screen shot of leetcode with your login and o/p**	1. Create a JSP page to display student information entered by the user 2. Create a JSP application that takes user registration details such as Name, Email, Phone Number, and Password, and displays the submitted information on a result JSP page. **student.jsp** <!DOCTYPE html> <html> <head> <title>Student Information</title> </head> <body> Student Information Form

```
    <form action="studentResult.jsp" method="post">
        Name:
        <input type="text" name="name" required>
        <br><br>

        Roll Number:
        <input type="text" name="roll" required>
        <br><br>

        Course:
        <input type="text" name="course" required>
        <br><br>

        <input type="submit" value="Submit">
    </form>
</body>
</html>
```

studentResult.jsp

```
<%@ page contentType="text/html;charset=UTF-8" %>
<!DOCTYPE html>
<html>
<head>
    <title>Student Details</title>
</head>
<body>
    <h2>Student Details</h2>

    <%
        String name = request.getParameter("name");
        String roll = request.getParameter("roll");
        String course = request.getParameter("course");
```

```
    %>

    <p>Name: <%= name %></p>
    <p>Roll Number: <%= roll %></p>
    <p>Course: <%= course %></p>
</body>
</html>
```

registration.jsp

```
<!DOCTYPE html>
<html>
<head>
    <title>User Registration</title>
</head>
<body>
    <h2>User Registration Form</h2>

    <form action="registrationResult.jsp" method="post">
        Name:
        <input type="text" name="name" required>
        <br><br>

        Email:
        <input type="email" name="email" required>
        <br><br>

        Phone Number:
        <input type="tel" name="phone"
               pattern="[0-9]{10}"
               maxlength="10" required>
        <br><br>

        Password:
```

```
        <input type="password" name="password"
            minlength="8" required>
        <br><br>

        <input type="submit" value="Register">
    </form>
</body>
</html>
```

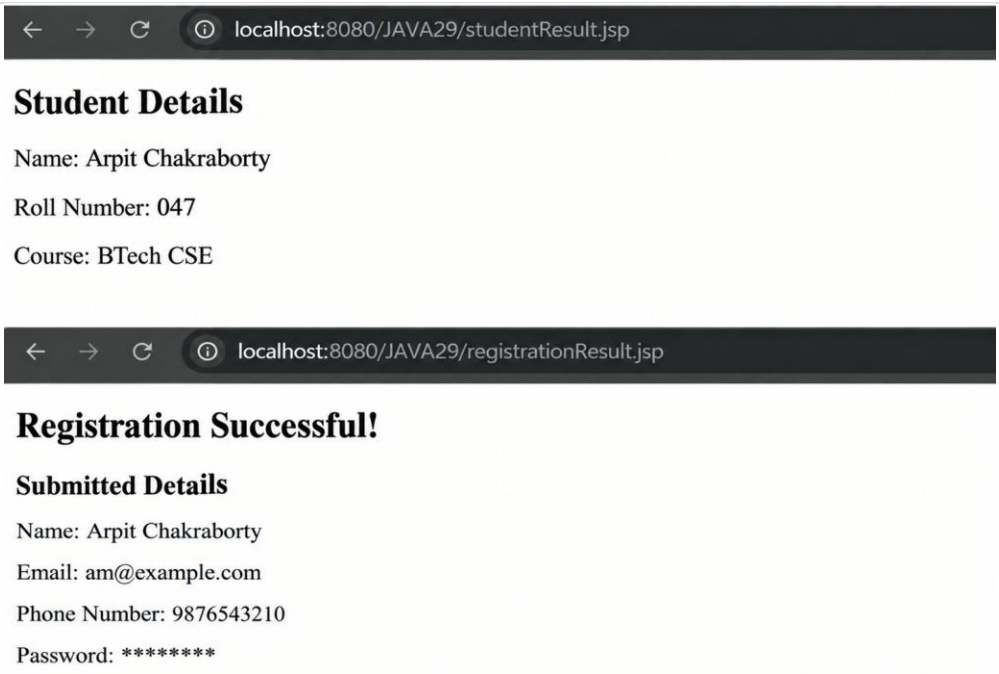

registrationResult.jsp

```
<%@ page contentType="text/html;charset=UTF-8" %>
<!DOCTYPE html>
<html>
<head>
    <title>Registration Result</title>
</head>
<body>
    <h2>Registration Successful!</h2>

    <%
        String name = request.getParameter("name");
        String email = request.getParameter("email");
        String phone = request.getParameter("phone");
    %>

    <h3>Submitted Details</h3>

    <p>Name: <%= name %></p>
    <p>Email: <%= email %></p>
    <p>Phone Number: <%= phone %></p>
    <p>Password: ********</p>
</body>
</html>
```

Output Screenshots (if applicable)	
Conclusion	The Student Information Form was successfully created using HTML and JSP. It accepts student details such as name, roll number, and course, and displays the submitted information on the result page. The User Registration Form was also successfully implemented using HTML and JSP. It collects user details such as name, email, phone number, and password, validates the inputs using HTML form validation attributes, and displays the submitted information on the result page while masking the password.
