

```
public class Student {
    private int rollNo;
```

```
private String name;

private String course;

public Student (int rollNo, String name, String course) {
    this.rollNo = rollNo;
    this.name = name;
    this.course = course;
}

public void displayStudent() {
    System.out.println("----- Student Details -----");
    System.out.println("Roll No: " + rollNo);
    System.out.println("Name: " + name);
    System.out.println("Course: " + course);
}
}
```

2. Faculty Package (faculty/Faculty.java)

```
package faculty;

public class Faculty {
    private int facultyId;
    private String name;
    private String department;

    public Faculty(int facultyId, String name, String department) {
        this.facultyId = facultyId;
        this.name = name;
        this.department = department;
    }

    public void displayFaculty() {
```

```

        System.out.println("\n----- Faculty Details -----");
        System.out.println("Faculty ID: " + facultyId);
        System.out.println("Name: " + name);
        System.out.println("Department: " + department);
    }
}

```

3. Main Program (CollegeManagement.java)

```

import student.Student;
import faculty.Faculty;

public class CollegeManagement {
    public static void main(String[] args) {

        Student s1 = new Student(101, "Arpit Chakraborty", "Computer Science");
        Faculty f1 = new Faculty(201, "Dr. Sharma", "Computer Engineering");

        s1.displayStudent();
        f1.displayFaculty();
    }
}

```

OUTPUT:

```

[Running] cd "c:\Users\Arpit\Java_assignment_2\CollegeManagement\" && javac CollegeManagement.java && java
CollegeManagement
----- Student Details -----
Roll No : 101
Name    : Arpit Chakraborty
Course  : Computer Science

----- Faculty Details -----
Faculty ID : 201
Name       : Dr. Sharma
Department : Computer Engineering

[Done] exited with code=0 in 1.25 seconds

```

2. Create a Java program by developing a user-defined package named library that contains a class to store and display book details such as book ID, title, author, and price. Import the package into the main program and display the book information.

1. Book.java (inside the library folder)

```
package library;
```

```
public class Book {
```

```
    int bookId;
```

```
    String title;
```

```
    String author;
```

```
    double price;
```

```
    public Book(int bookId, String title, String author, double price) {
```

```
        this.bookId = bookId;
```

```
        this.title = title;
```

```
        this.author = author;
```

```
        this.price = price;
```

```
    }
```

```
    public void displayBook() {
```

```
        System.out.println("----- Book Details -----");
```

```
        System.out.println("Book ID : " + bookId);
```

```
        System.out.println("Title  : " + title);
```

```
        System.out.println("Author : " + author);
```

```
        System.out.println("Price  : Rs. " + price);
```

```
    }
```

```
}
```

2. LibraryManagement.java (Main Program)

```
import library.Book;

public class LibraryManagement {

    public static void main(String[] args) {

        Book b = new Book(101, "Java Programming", "Herbert Schildt", 650.00);

        b.displayBook();
    }
}
```

OUTPUT:

```
[Running] cd "c:\Users\Arpit\Java_assignment_2\LibraryManagement\" && javac LibraryManagement.java && java
LibraryManagement
----- Book Details -----
Book ID : 101
Title   : Java Programming
Author  : Herbert Schildt
Price   : Rs. 650.0

[Done] exited with code=0 in 1.241 seconds
```
